2. DEPLOYMENT — HOW TO RUN

Option A: Local Browser (Recommended — no server needed)

1. Download all 17 HTML files to a single folder on your MacBook Air (keep them together).
2. Open **NP_Hub.html** in Safari or Chrome — this is your main entry point.
3. All navigation links use relative paths (e.g. NP_Finance.html) — they work automatically when files are in the same folder.
4. Bookmark **NP_Hub.html** in your browser for quick access.

Option B: Azure Static Web Apps (Cloud Deployment — recommended for team access)

1. Create an Azure Static Web Apps resource in Azure portal (UK South region)
2. Upload all 17 HTML files as static assets
3. Access via your Azure-assigned URL: `https://[app-name].azurestaticapps.net/NP_Hub.html`
4. Add Azure AD authentication for access control (optional)
5. Cost: Free tier available for small deployments

Option C: SharePoint Integration

Upload HTML files to a SharePoint document library and add as web part iframes on a SharePoint page for full M365 integration.
